

Emoli™ Lotion

Benzalkonium Chloride BP, Chlorhexidine Hydrochloride BP, Isopropyl Myristate BP and Light Liquid Paraffin BP

COMPOSITION

Emoli™ Lotion: Each 100 gm lotion contains Benzalkonium Chloride BP 0.1 gm, Chlorhexidine Hydrochloride BP 0.1 gm, Isopropyl Myristate BP 2.5 gm & Light Liquid Paraffin BP 2.5 gm.

PHARMACOLOGY

Benzalkonium Chloride & Chlorhexidine Hydrochloride act as effective antiseptic. Its antimicrobial properties assist in overcoming infection, whether from Staphylococcus aureus, the pathogen which often complicates eczema and associated pruritus, or secondary infection caused by scratching.

Liquid Paraffin & Isopropyl Myristate permit rehydration of dry skin by forming an occlusive barrier within the skin surface. Thus, reduces drying from evaporation of water that diffuses from the underlying layers.

INDICATION

Emoli™ Lotion is an antimicrobial emollient for the management of dry and pruritic (itchy) skin conditions, especially eczema and dermatitis and for use as a soap substitute.

DOSAGE & ADMINISTRATION

For application on the skin

Apply the lotion on the affected areas and massage gently into the skin, until absorbed.

Manufactured by

SQUARE

**PHARMACEUTICALS LTD.
BANGLADESH**

For use as a soap substitute

Use as a cleanser in the bath or shower or for other toiletry purposes, instead of ordinary soap or shower gel.

USE IN PREGNANCY AND LACTATION

No special precautions needed.

CONTRAINDICATION

Do not use in cases of known sensitivity (especially generalized allergic reaction) to any of the ingredients used in this preparation.

ADVERSE EFFECT

No remarkable adverse effects have been reported.

STORAGE

Do not store above 25°C. Keep out of the reach of children.

HOW SUPPLIED
